

Summary: Coordination Stability Analysis

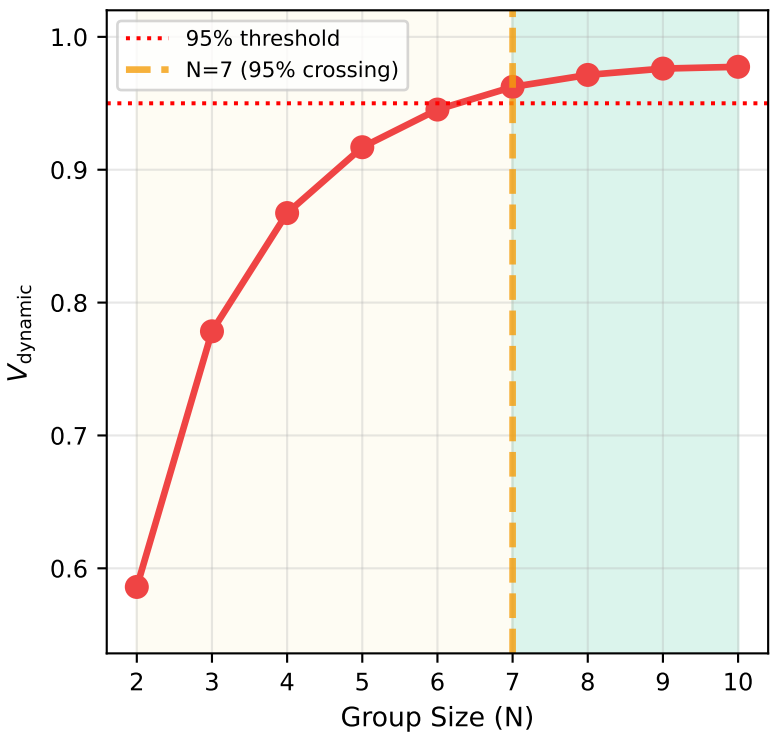

(1) Parameter Space

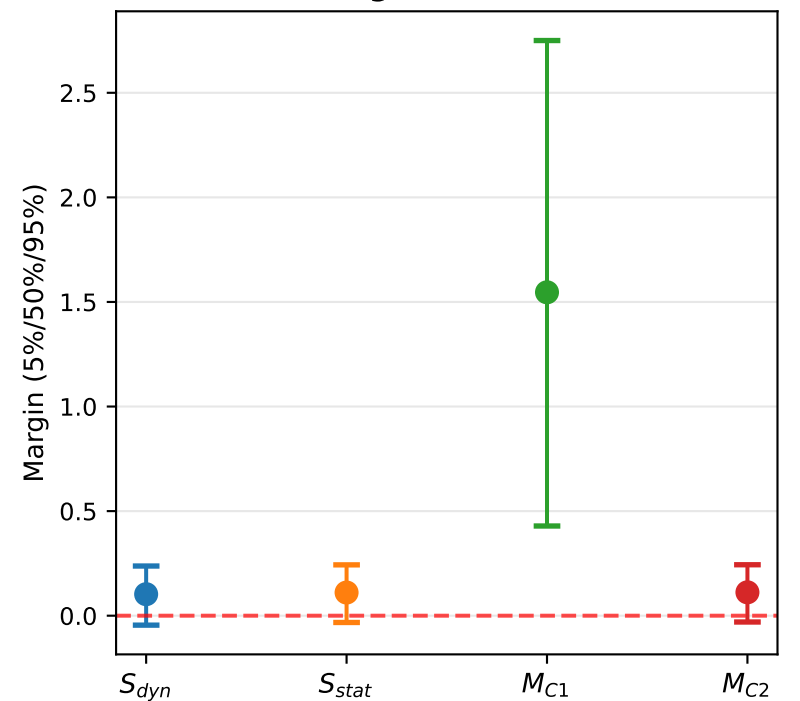

(2) Overall Robustness

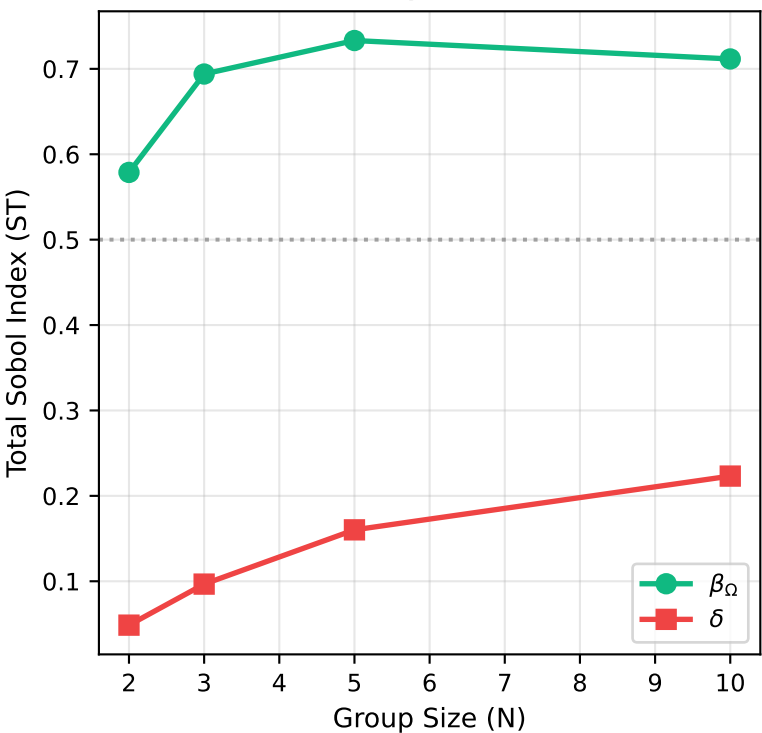

(3) Thresholds: N=7 (95%), N=10 (97.7%)

(4) Margin Distributions

(5) Sensitivity vs N: β_Ω and δ

KEY FINDINGS:

- $N < 7$: Risky (<95% stable)
- $N = 7$: Crosses 95% threshold
- $N = 10$: 97.7% (saturating)
- $N = 2$: β_Ω dominates
- $N = 10$: β_Ω dominates (δ share grows with N)
- $\delta^* = 0$ achievable (when $\beta_\alpha \geq \beta_D$; robust to any q)
- $V_{dynamic} = 88.7\%$ (uniform prior, $q \in [0, 0.3]$)
